In an electrical circuit composed of a constant voltage source, E , in series with a resistance, R , and a condenser (capacitor), C , theory indicates that the response This interactive tutorial explores how changes in values of resistance and capacitance effects the RC time constant in RC circuits.

Charging and discharging of a $10\mu\text{F}$ capacitor with variable time constant. What it shows: The growth and decay of current in an RC circuit with a time constant The Time Constant of Attentional Control: Short, Medium and Long (Infinite?) Authors: Leonardo Chelazzi , There will be some value of time constant for that decay process which we will call “Tau”. With some admittedly arbitrary but convenient scaling, photo of all of the equipment, a function generator, an oscilloscope and a breadboard. In this lab experiment we will measure the time constant τ of an RC circuit Time constant of the given circuit is τ . If the battery is replaced by an ac source having voltage $V=V_0\cos\omega t$, power factor of the circuit will be... After studying this section, you should be able to describe: • The Time constant of a CR circuit ...and carry out calculations involving; •Time constants in a simple Homogeneous equations are exponential.
